**Title: Ethical aspects of intensive insect production**

Keywords: Animal welfare, animal ethics, sustainability,

Description: A thesis that analyzes the growing interest in intensive insect production from an ethical perspective. The project can focus on issues within animal welfare, animal ethics or sustainability and should differentiate between different practical uses of insects and different value perspectives.

**Title: Ethical aspects of plant-based meat-alternatives**

Keywords: Meat, meat alternatives climate change, food values

Description: A thesis that analyzes current discussions on high-tech based meat alternatives such as clean meat, lab grown meat and products like "Impossible Foods" to identify possible ethical conflicts attached to the introduction of such products. Thesis must include presentation of different and relevant value perspectives.

**Title: Hunting, wildlife management and perception of nature**

Keywords: Hunting, nature perception, legitimacy, values, stakeholders

Description: Recreational hunting is a popular activity in Denmark. It allows participants to immerse themselves in nature, and maybe, live out their nature as well as actually influencing nature by plantings and other forms of management. But what is the nature of hunting and the hunting of nature? Theses should make a study of different key stakeholders' view of nature in general and in relation to hunting and analyse the implications for the way hunting is carried out, including its legitimacy.
